Work Completed during Period Covered by Report:

(This information will be posted on the Outdoor Heritage Fund/Industrial Commission website)

The Aquatic Habitat Infrastructure Enhancement grant is nearing completion with one remaining project to be completed. The second project, Long Lake Unit G-19 was completed this past summer, restoring 10 acres of wetland habitat that had been previously drained due to erosion of structure and embankment. The sheet piling was replaced and the embankment armored to withstand future high water events. The restoration now allows the shallow wetland to remain productive and available for migrating birds and other North Dakota wildlife.

During the reporting period, the Long Lake Unit II project went out to bid and the contract was awarded to a contractor. Just as work began in early December, multiple snow events and negative temperatures put progress on hold. They plan to begin removing snow and commencing with shaping the embankment and hauling rip-rap to the site when conditions allow. When complete, the project will repair, enhance, and protect 444 acres of a critically important habitat types utilized by migratory and breeding waterfowl in perpetuity, maintain the diversity of wetland habitat types on the refuge, restore refuge manager's ability to manage water levels in the shallow wetlands, and provide optimal habitat and refuge for other wetland dependent species.

Photos of work completed are welcome (If appropriate, please submit photos of key elements of the project completed or in progress during reporting period) Do not exceed five photos per project report.

The completed G-19 project with newly armored embankment and water control structure that restored 10 acres of emergent wetlands previously drained by bank erosion.

Newly restored wetland on the Long Lake National Wildlife Refuge G-19 project
