Work Completed during Period Covered by Report:

(This information will be posted on the Outdoor Heritage Fund/Industrial Commission website)

Ray Zajac, landowner of 120 acres approximately three miles northwest of Fordville, constructed a barbed-wire fence for rotational grazing. Fencing, illustrated in Figure 1, divides the property into 3 grazing cells. Following a prescribed grazing plan, the producer will rotate cattle throughout the cells in order to ensure maintenance and improvement of vegetation by allowing for adequate recovery/rest periods during the growing season as well as meet the needs of the grazing animal and enhance wildlife habitat. Rotational grazing will also limit grazing within the riparian area, resulting in reduced erosion, sedimentation, and nutrient pollution in the Forest River.

The fence measures 14,233 feet with 10,386 feet of boundary fence and 3,847 feet of cross fence. This OHF reimbursement request is based on Section 319 Nonpoint Source Pollution Program Cost-Share Guidelines, which indicate a cost-share payment of \$1.08/ft. of barbed wire fence (60% of \$1.80/ft.).
